This document contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements include, but are not limited to, statements about the Wa’ad Al Shamal Phosphate Company (also known as the Ma’aden joint venture), the acquisition and assumption of certain related liabilities of the Florida phosphate assets of CF Industries, Inc. (“CF”) and Mosaic’s ammonia supply agreements with CF; repurchases of stock; other proposed or pending future transactions or strategic plans and other statements about future financial and operating results. Such statements are based upon the current beliefs and expectations of The Mosaic Company’s management and are subject to significant risks and uncertainties. These risks and uncertainties include but are not limited to risks and uncertainties arising from the ability of the Ma’aden joint venture to obtain additional planned funding in acceptable amounts and upon acceptable terms, the future success of current plans for the Ma’aden joint venture and any future changes in those plans; difficulties with realization of the benefits of the transactions with CF, including the risk that the cost or capital savings from the transactions may not be fully realized or may take longer to realize than expected, or the price of natural gas or ammonia changes to a level at which the natural gas based pricing under one of the long term ammonia supply agreements with CF becomes disadvantageous to Mosaic; customer defaults; the effects of Mosaic’s decisions to exit business operations or locations; the predictability and volatility of, and customer expectations about, agriculture, fertilizer, raw material, energy and transportation markets that are subject to competitive and other pressures and economic and credit market conditions; the level of inventories in the distribution channels for crop nutrients; changes in foreign currency and exchange rates; international trade risks and other risks associated with Mosaic’s international operations and those of joint ventures in which Mosaic participates, including the risk that protests against natural resource companies in Peru extend to or impact the Miski Mayo mine; changes in government policy; changes in environmental and other governmental regulation, including greenhouse gas regulation, implementation of numeric water quality standards for the discharge of nutrients into Florida waterways or efforts to reduce the flow of excess nutrients into the Mississippi River basin, the Gulf of Mexico or elsewhere; further developments in judicial or administrative proceedings, or complaints that Mosaic’s operations are adversely impacting nearby farms, business operations or properties; difficulties or delays in receiving, increased costs of or challenges to necessary governmental permits or approvals or increased financial assurance requirements; resolution of global tax audit activity; the effectiveness of Mosaic’s processes for managing its strategic priorities; adverse weather conditions affecting operations in Central Florida, the Mississippi River basin, the Gulf Coast of the United States or Canada, and including potential hurricanes, excess heat, cold, snow, rainfall or drought; actual costs of various items differing from management’s current estimates, including, among others, asset retirement, environmental remediation, reclamation or other environmental regulation, Canadian resources taxes and royalties, the liabilities Mosaic assumed in the Florida phosphate assets acquisition, or the costs of the Ma’aden joint venture, its existing or future funding and Mosaic’s commitments in support of such funding; reduction of Mosaic’s available cash and liquidity, and increased leverage, due to its use of cash and/or available debt capacity to fund share repurchases, financial assurance requirements and strategic investments; brine inflows at Mosaic’s Esterhazy, Saskatchewan, potash mine or other potash shaft mines; other accidents and disruptions involving Mosaic’s operations, including potential mine fires, floods, explosions, seismic events or releases of hazardous or volatile chemicals; and risks associated with cyber security, including reputational loss, as well as other risks and uncertainties reported from time to time in The Mosaic Company’s reports filed with the Securities and Exchange Commission. Actual results may differ from those set forth in the forward-looking statements.
In this cyclical industry, the positive secular trends continue.

Long-term value creation is predicated on effective capital deployment.

Capital deployment near the trough of the cycle maximizes value creation:
  – Depressed investment values
  – Increasing leverage to the upcycle

For Mosaic, and for our investors, now is the right time to invest.
Why Now?

Balance Sheet and Capital Update

Transformed Balance Sheet:
- Returned $3.2B in 2014
- ~$190 million remaining under current share repurchase authorization as of February 6, 2015
- Committed to maintaining targets

Expect to continue to generate strong cash flow and excess cash
Future Gross Margin per Share: Volume and Rate

Gross Margin per Share

- 2013: $4.7
- Phosphates: $1.7
- Potash: $1.1
- Share Repurchase / Corporate: $1.5
- 2018 Forecast: $9.0

91% upside excluding any cyclical improvement

Source: Mosaic

Note: Assumptions in the appendix. Based on current BOD authorization, not including future repurchase authorizations. Subject to risks and uncertainties including those stated in the Safe Harbor Statement.
Unchanged Cash Use Priorities

- Maintain ratings & financial strength
- Sustain assets and recurring dividend
- Investments to drive organic growth
- Opportunistic strategic investments
- Return excess cash to shareholders
The Mosaic Company
Analyst Day 2015 – March 30 - 31
Appendix: Assumptions

Phosphates:
- Ma’aden JV contribution embedded in gross margin, actual reporting is as an equity investment under U.S. GAAP.
- ADM business includes an incremental, 2 million tonnes of blended product plus synergies.
- Raw material savings based on increased NH$_3$ manufacturing based on de-bottlenecking vs. CRU published prices for 2018, lower costs from sulfur melting flexibility, and CF Industries ammonia off-take of 725k tonnes, which assumes difference between 2013 pricing and CF contract pricing.
- MicroEssentials sales volume growth assumes 3.4 million tonnes in 2018 minus 2013 volumes multiplied by an assumed margin premium over DAP, not including incremental selling, general and administrative expenses.
- Selling prices and raw material costs (other than those noted above) are considered flat to 2013.
- Capacity increase based on 1.8 million tonnes from CF Industries phosphate acquisition and 0.9 million from Ma’aden JV.

Potash:
- Cost savings shown is net of 2% inflation.
- Optimization of assets assumes 90% operating rate at lowest cost plants, based on 2013 production.
- Growing volumes assumes 10.6 million tonnes of sales, based on 12.2 million tonnes of total capacity, in 2018.
- Capacity increase based on approved expansions: 0.6 million at Belle Plaine, 0.5 million at Colonsay and 0.9 million at Esterhazy.

Corporate:
- Some cost savings occurred in calendar 2013.
- Additionally, assumes some of the corporate savings are embedded in costs of goods sold.

All scenarios assuming pricing flat to 2013
